

I'm concerned about the likelihood for interference to HF and VHF frequencies by BPL. ARRL tests show that the noise floor on HF will increase dramatically if BPL is allowed to go forward. Both Amateur Radio and military communications use these frequencies, and the interference will have a strongly negative effect on the use of these communications systems. it is a fact that many powerline systems already have problems with their equipment, adding BPL to these systems will cause even more problems. There are many other methods already in place to provide internet access. The only reason for BPL is profits for the electric utilities. Do not allow the implementation of BPL.
